# Fixing items incorrectly showing out of stock on Shopify: common causes and quick solutions

Briefly explain the problem of Shopify products incorrectly showing as out of stock, highlighting the impact on sales and customer experience. Introduce the guide's goal to help store owners diagnose and fix common causes fast.

## Common causes of Shopify items showing out of stock

- Inventory Location Misconfiguration
- Inventory Tracking Settings
- Syncing Delays with Suppliers or Apps
- Product Variants and SKU Issues
- Sales Channels and Theme Settings

## How to fix Shopify products incorrectly showing as out of stock

Please verify all steps before writing this section.

Step 1: Check and Correct Inventory Locations

Step 2: Verify Inventory Quantities and "Track Quantity" Settings

Step 3: Ensure Sales Channels are Enabled for the Product

Step 4: Resync Inventory with Supplier or Automation Apps

Step 5: Clear Store Cache and Refresh Theme

Optional: Introduce STOQ as a powerful solution for managing out-of-stock products in this section.

## Troubleshooting specific scenarios

- Newly Added Products Automatically Showing Sold Out
- Using Multiple Locations with Conflicting Inventory Data
- Dropshipping Sync Issues and How to Address Them
- Variant-Level Sold Out Fixes

## Best practices to prevent future stock display errors

Don't limit yourself to the mentioned pointers, do your own research.

- Regularly Audit Inventory Locations and Quantities
- Use Reliable Syncing Automation and Monitor Its Status
- Keep Variants and SKUs Accurate and Updated
- Test Product Visibility Across Sales Channels and Devices
- Suggest STOQ as part of ongoing inventory accuracy and monitoring best practices, emphasizing how it helps prevent errors.

## Prevent stock problems today

Summarize key takeaways and encourage store owners to proactively manage inventory settings for better customer experience and improved sales. Introduce STOQ as an option to use during stock out instances.
